pt name :- Huynh Toyet Trinh

pt came in the clinic in the cc
of dislodged bridge

OPX reveals that - peri-apical infection

ixw # 21_R and hemisection is done

previously ixw # 19_R.

- missing - 20.
- Faulty bridge.
- pt is informed regarding the infection
and if we cement the same bridge
it is with poor prognosis or will not
last long.
- pt wants it to be fixed on temporary bases
she wants to go to vietnam after coming
she will think about permanent solution.

- if any swelling or pain happens clinician is not responsible.

- if the bridge will come again till december will be re-cemented free.
