Thanks for choosing the new enamel technology

Enamel technology is a procedure where we bond a thin film of a dental material(composite bonding)on your tooth outer surface

material name : Ips empress direct from Ivoclar viva dent

Also, there are other brands that can be used to create the thin layers that makes teeth white and straight.

The material has a variety of uses in dentistry

It is bonded to the enamel surface by using the universal bond , there are main 4 shades BL1,2,3,4

Shade selection is on patient desire only without interference from the dentist.

Usually after applying the material to the tooth outer surface you will feel your teeth size is bigger but this is just a feeling will fade within 2-3 days

Usually you will feel uncomfortable for one week during biting or chewing food and your teeth are not chewing food properly, this will fade away within one week.

You may feel that some letters are not pronounced correctly it will be back to normal within one week.

During first week avoid any staining food or drink and brush your teeth with a a-hard tooth brush and whitening tooth paste

Life time for this technique is 2 years during this 2 years you should visit the clinic every 3 months for a check up and brush your teeth 3 times daily to avoid any caries or gingivitis

This layer can break if you bite hard objects like nails or plastic, then you can visit us to repair it.

During first week one or two layers can break we replace them it is easy

You have first one month to repair the layers for free then payment for repairs after the first month depend on the clinic prices

Any time you don't want the layers on the teeth you can visit the clinic to remove it.

All cosmetic techniques were explained including:

1-crown

2- veneers

3- labial resin veneers

4- braces

Patient choose labial veneers composite to enhance shape and color

Instructions were given for how to care for the labial veneers

And also the informed that these veneers can cause caries and gingival inflammation in case no good care or follow ups every 3 months are made.

Also informed that these veneers can break or discolor if no proper brushing and eating habits are followed.

And informed that Lifetime of the labial resin veneers are 2 years usually depending on care and hygiene.

Patient understood all information in a clear way and decided to the labial resin veneers for upper and Lower teeth after choosing the shade and approving the mock up.

After the procedure is done and you want to remove it you pay 300 for removal of the layers and no refund for the paid amount.

APPROVED FOR MOCK – UP:
