Patient by name Neesha. Dilip. Gursikhami Age: 50 yrs came to the clinic with the chief complaint of fractured filling in the right upper back tooth region since 1 week.

On Oral examination, it was found the patient has a fractured restoration with tooth # 1. (distoocclusal). tooth # 1 has only 30% of the tooth left and any restoration done will not last long & there are chances of the tooth or restoration fracturing. The patient has been explained if it fractures, it has to go for extraction. The patient in the meanwhile just wants to go in refillings and has given her consent for restoration with the same.
